OBJECTIVE

Software Engineer with 3 years of experience in Gen AI, seeking full-time roles.

EDUCATION

Master of Computer Application, GIFT, Bhubaneswar

2021 - 2023

SKILLS

Languages: Python (Expert), SQL

Frameworks: FastAPI, Flask, Django

GenAI & LLMs: LLMs (Llama 3.2, GPT-4), RAG, LangChain, CrewAI, Whisper, Vector Databases (Pinecone, ChromaDB, FAISS)

Machine Learning: PyTorch, TensorFlow, OpenCV, InsightFace

Databases: PostgreSQL, MySQL, Redis, TimescaleDB

Streaming & Infrastructure: Docker, AWS, WebRTC, MediaMTX, RabbitMQ, Git, Linux

EXPERIENCE

Python Developer

Aug 2025 - Present

Oasys Tech Solution

Odisha, India

- **Built** a facial recognition-based attendance system using InsightFace and WebRTC, achieving **99.8% accuracy** and reducing manual verification time by 20%.
- **Deployed** a real-time video streaming application for automated behavioral analysis, processing **100+ concurrent streams** and flagging compliance issues
- **Implemented** an intelligent agentic chatbot capable of generating predictive models and dynamic data visualizations.

Software Engineer

Dec 2023 - Jul 2025

Cavisson Systems

Noida, India

- Developed an LLM observability platform to instrument LLM applications for monitoring their performance.
- Implemented thread monitor for capturing running thread information and statistics during runtime.
- Implemented heap monitor for capturing detailed heap memory statistics.
- Implemented GC monitor for capturing detailed garbage collection statistics.

Associate Software Engineer

Jun 2023 - Dec 2023

Cavisson Systems

Noida, India

- Developed an observability platform to instrument python web applications for monitoring their performance.
- Created Flask application of employee management using Postgres and Redis.
- Worked on various bugs and issues related to an application performance monitoring tool.

PROJECTS

1. Real-time Stock Application :

- **Engineered** a Pub/Sub recommendation engine to push personalized stock alerts based on user-subscribed markets.
- **Implemented** predictive algorithms that analyze historical data to forecast trends and generate automated investment reports.

2. Facial Recognition System :[Live Demo](#)

- **Engineered** an automated attendance system utilizing real-time face detection technology.
- **Designed** a streamlined user interface to capture facial data and manage attendance records efficiently.
